DCA Chemical Technology

DCA-258

Overview

DCA-258 is a modified acrylate leveling agent, compared with tradition silicone free leveling agent; it has excellent compatibility in all kinds of common resin system, excellent leveling and substrate wetting.

Physical and chemical data

Chemical component: modified acrylate compound (silicone free)
Appearance: light yellow transparent solution
Active content: 50%
Solvent: xylene

Properties

1. Excellent compatibility with common resin
2. Excellent leveling

Application fields

DCA-258 is suitable for all kinds of solvent-based coating system, including but not limited the below;
All kinds of resin system of wood paint
Thermoplastic resin system, such as thermoplastic acrylic resin, nitrocellulose lacquers etc.
UV curing system

Add method

Added in any step of production

Dosage

0.1%-1.0% of total formula, normally, the volume of addition is about 0.2%-0.5% of total formula

Packing and storage

25KG in iron drum, store in cool and dry place.
